

## Maintenance recommendations

---

Recommendations for the renovation and daily care of Polygood panels.

### **:Daily maintenance**

Polygood panels are easy to clean. The panels should be cleaned with warm water or solvent and spirit free detergents.

To care for the surface, use furniture polishes and plastic polishes.

### **:Renovation**

#### **1 STEP - surface cleaning**

---

Pre-clean the surface with warm water and a solvent-free liquid detergent

#### **2 STEP - abrasive blasting**

---

For deep scratches and damage, it is possible to use abrasive products from Mirka. We recommend using fine grit abrasives.

Example: Abranet 540 (P600), Abranet 540 (P800) or Abranet 540 (P1000). Depending on the depth of damage. <https://www.mirka.com/uk/ABRANET-540/>

Damage can be repaired by progressive use of abrasives with different grit sizes.

Example: P600 > P800 > P1000 + Polishing (if necessary)

**Important:** before using abrasive materials - make sure that the panel cannot be repaired by polishing.

#### **3 STEP - Polish**

---

If the damage is not serious, it can be removed by polishing.

For deep damage use a special polishing compound: Polarshine 45 Polishing Compound

<https://www.mirka.com/uk/Polarshine-45-Polishing-Compound-1L-6-Pack-7994510111/>

For a glossy effect use: Polarshine 12 Polishing Compound

<https://www.mirka.com/uk/Polarshine-12-Polishing-Compound-1L-6-Pack-7991210111/>

For renovation of matte surfaces: Polarshine Finishing Compound F05
